

AutoAlert

An AI System That Calls for Help Before You Even Notice an Accident

What Problem Are We Solving?

Every day, hundreds of accidents happen on roads across India. In many cases, people lose their lives not because the accident was too severe — but because help did not reach them in time.

Regular CCTV cameras are installed everywhere — on roads, highways, and junctions. But these cameras just record. Nobody is watching them 24/7. So even if an accident happens right in front of a camera, nobody calls the ambulance until a passerby notices — which could be minutes or even hours later.

Those lost minutes can cost someone their life.

What Is Our Solution?

AutoAlert is a smart system that gives existing CCTV cameras the ability to think. Instead of just recording, the camera can now detect when something goes wrong — and automatically call for help within seconds.

We do NOT replace the old cameras. We simply add a small smart device — called an AI Box — right next to the existing camera. This box watches the camera feed at all times and reacts instantly when it detects an emergency.

How Does It Work? (In Simple Words)

Step 1	The old CCTV camera records the road as it always does.
Step 2	The AI Box connected to it watches every frame of the video.
Step 3	If the AI Box sees blood on the road, a car crash, or a person lying motionless — it immediately recognizes it as an emergency.
Step 4	It verifies the detection over a few seconds to make sure it is real and not a false alarm.

Step 5	It automatically calls the nearest Ambulance (108) and Police (100) and sends an SMS with the exact location of the camera.
Step 6	It saves a video clip of the incident and uploads it to a cloud server so responders can see what happened before they arrive.

What Can It Detect?

What It Detects	How It Detects It
Blood on the road	Recognizes the color and spread pattern of blood using AI
Car crash	Detects sudden impact, vehicle damage, and crash sounds
Person lying on ground	Identifies a person who is motionless for too long
Smoke or fire	Detects visual signs of fire after a crash

What Is the AI Box?

Think of the AI Box as the brain we are giving to a camera that previously had none. It is a small, locked, weatherproof device that is installed right next to the camera on the same pole. It stays active 24 hours a day, 7 days a week.

Inside the AI Box:

A mini computer (Raspberry Pi)	Runs the AI detection programs
A SIM card module	Makes phone calls and sends SMS alerts
A GPS chip	Knows the exact location of the camera
A microphone	Listens for crash or impact sounds
A storage drive	Saves video clips of incidents
A battery backup	Keeps working even during power cuts

Why Not Just Buy New Smart Cameras?

A brand new AI-enabled smart camera costs between ₹40,000 and ₹1,50,000 per unit. There are lakhs of CCTV cameras already installed across India. Replacing all of them would cost crores and take years.

With AutoAlert, we simply add an AI Box costing around ₹19,600 to each existing camera. The old camera stays exactly as it is — nothing is removed or replaced. This approach saves up to 70% of the cost and can be deployed very quickly on a large scale.

Who Benefits From This?

Accident Victims	Get help within seconds instead of waiting for someone to notice
Ambulance Services	Receive instant alerts with exact GPS location
Police Departments	Automatic notification with video evidence of the incident
City / Government	Smarter use of existing CCTV infrastructure at low cost
Hospitals	Better prepared as alerts come earlier, giving more time to respond
Families	Higher chance their loved ones survive due to faster response

How Much Will It Cost?

Scale	What It Covers	Estimated Cost
Pilot Project	3 cameras at an accident-prone location	₹1.5 - ₹2.5 Lakhs
Small Area	10 cameras covering a busy junction or street	₹3 - ₹5 Lakhs
City Level	100 cameras across major roads	₹10 - ₹20 Lakhs
State Level	1000+ cameras on highways and cities	₹3 Crore+

In summary — AutoAlert turns every ordinary CCTV camera into a life-saving device. It does not need a person to watch the screen. It does not wait for someone to call. The moment it sees an emergency, it acts. Because in an accident, every second counts.
